MICHMED/VAAAHS Network Overview

Michigan Medicine (MICHMED) and the VA Ann Arbor Healthcare System (VAAAHS) have joined programmatic forces to create a network of postdoctoral training programs in Professional Psychology. All of the programs in the network are APA accredited. The Child Clinical Program is located at Michigan Medicine, has its own separate accreditation, and in 2004 became the first child postdoctoral training program in the nation to be granted specialty accreditation by the Commission on Accreditation of the American Psychological Association in Child Clinical Psychology. MICHMED and VAAAHS provide a rich interdisciplinary training environment with seminars, invited lectures, and opportunities for collaboration with faculty across disciplines and departments. The Child Clinical Program fellows participate in many joint training activities within the Network of programs. The overall Training Network is led by the Network Training Committee Chair, J. Todd Arnedt, Ph.D. The Child Training Director is Emily Bilek, Ph.D.

The training philosophy of the programs in the training network is a scientist-practitioner model. The institutional philosophy and training programs' values are focused on normative healthcare, ethical values of beneficence, non-maleficence, and social contract in a context of public service. The central goal and mission of the training network is to contribute to the development of competent clinical psychologists. To serve this overall goal, the training network welcomes applications from individuals who have graduated from accredited clinical/counseling psychology programs and completed accredited internship programs. The program selects candidates whose academic and clinical preparation, supervisor recommendations, and perceived synergy with our programs are ideally suited. Thus, we hope to identify postdoctoral fellows who demonstrate a readiness to learn. The training network provides the breadth and depth of experiences in assessment, treatment, consultation, and scholarly support of practice and research. Fellows in the Child Clinical Program complete their training over a two-year period. Appointments are made initially for one year with a second-year reappointment being expected but at the discretion of the postdoctoral fellow and the program. Satisfactory completion of the two-year postdoctoral residency generally requires a minimum of 22 months of active participation with final approval and certification of all postdoctoral trainees by the Network Training Committee. The current stipend is \$54,144 for 1st year fellows and \$54,540 for 2nd year fellows. Benefits include healthcare coverage, vacation, sick and professional development time, and travel support for professional development. The University of Michigan is a non-discriminatory/affirmative action employer. We especially encourage applications from members of underrepresented groups. The deadline for applications for the 2022-2024 training years will be December 1, 2021. Submission of materials via our online portal is encouraged, but email and paper submissions are acceptable. Please see Application Process on page 21 for additional information.

Questions about the accreditation and the accreditation process can be addressed to:
Office of Program Consultation and Accreditation American Psychological Association
750 First Street N.E., Washington DC, 20002
Phone: 202-336-5979

Clinical Child Psychology Program Overview

The Clinical Child Psychology Postdoctoral Training Program in the Department of Psychiatry at Michigan Medicine was the first clinical child psychology postdoctoral training program in the nation to be accredited as a specialty program by the American Psychological Association. Our overarching goal is to develop exceptional scientist-practitioners. We believe that advanced, specialized training in psychology over the two years of the fellowship is extremely important for those who seek academic careers or positions of leadership in clinical and educational settings. We seek applicants with strong research potential who are highly motivated to develop their own program of systematic research under the mentorship of our clinical child psychology faculty. The program is relatively unique in providing a balanced experience between advanced clinical training, research, and professional development. Fellows spend approximately 50% of their time on research and educational opportunities and 50% on clinical responsibilities.

Our Clinical Child Psychology Postdoctoral Training Program provides advanced training in the evaluation and treatment of children, adolescents and their families; professional consultation as a clinical child and adolescent psychologist; and programmatic empirical research. It also prepares psychology fellows for licensure as a clinical psychologist and board certification in Clinical Child and Adolescent Psychology through the American Board of Professional Psychology.

The primary training setting is the Rachel Upjohn Building, home to the U-M Depression Center and Ambulatory Psychiatry Programs. Separate clinical areas for children and adolescents, adults, and substance-abuse patients make up the first floor, with 335 offices and outpatient treatment rooms where psychiatrists, psychologists, social workers, nurses, and primary care clinicians can meet with and treat patients and families. The outpatient clinics are responsible for approximately 1200 new child and family evaluations and 11,000 return visits each year.

Postdoctoral psychology fellows have the opportunity to implement and become highly skilled in a wide range of evidence-based, developmentally and culturally sensitive, psychosocial treatments for children, adolescents, and families. Psychology fellows can choose to participate in a number of specialized clinics such as our Trauma and Grief Clinic and the Infant and Early Childhood Clinic, highlighting evidence-based treatment modalities such as Trauma Focused Cognitive Behavioral Therapy, Trauma and Grief Component Therapy, Child Parent Psychotherapy, and Parent Management Training

MICHMED Facilities

MICHMED consists of hospitals, health centers, and clinics owned and operated by the University. At its core is the UM Medical Center, a large, attractive interconnected complex of contemporary buildings, located virtually in the center of Ann Arbor, a focal point of the city and the University campus. Major facilities consist of the University Hospital (UH), the Cancer and Geriatric Centers, and the Maternal and Child Health Center (MCHC), which is comprised of Mott Children's Hospital, Von Voigtlander Women's Hospital, and the Holden Neonatal Unit. The UM Hospitals have a total bed capacity of 809. The UM

Medical Center provides more ambulatory patient care visits than any other academic medical center in

the country, approximating 1.6 million annually. The East Ann Arbor Medical Campus, Kellogg Eye Center, Turner Geriatric Center, and the Ann Arbor Veterans Affairs Hospital and Health System are in close proximity. Adding to the University's research capabilities in 2009, UM acquired the North Campus Research Complex—formerly the Pfizer property—which is close to the East Ann Arbor Medical Campus, and encompasses four parcels of land and 30 buildings. The acquisition added nearly two million square feet of sophisticated laboratory facilities and administrative space, along with furnishings.

The Clinical Child & Adolescent Psychology Section is housed in the Rachel Upjohn Building, which is located on the East Ann Arbor campus, a state-of-the-art facility located on the East Ann Arbor Medical Campus that was completed in 2006. The three-story building features a 120-seat auditorium and suite of meeting rooms. The first floor includes ambulatory psychiatry clinics for children, adolescents and adults, as well as substance abuse clinical areas. The first floor has 335 offices and outpatient treatment rooms where psychiatrists, psychologists, social workers, nurses, and primary care clinicians can meet with patients and families. Each fellow has office space with a phone and computer, as well as dictation. Rotations are also available at C.S. Mott Children's Hospital. Our Nyman Family Unit is a newly designed, state of the art, 16-bed, pediatric psychiatry inpatient unit. The Comprehensive Eating Disorders Program also house partial-hospitalization and outpatient eating disorders services within C.S. Mott Children's Hospital.

Education

In addition to core curriculum, fellows have several unique learning opportunities, ranging from targeted coursework to visiting lectures. Educational opportunities include both mandatory training requirements, designed to ensure smooth and consistent progress throughout the training program, and optional training opportunities that can be pursued to enrich the training experience to the extent that time is available. Fellows work with their primary mentors to develop an individualized plan of learning, so that they are spending approximately 10% of their time in didactic learning.

Required:

- Weekly Professional Development Seminar (First Year Fellows)
- Weekly Child Seminar
- Monthly Postdoctoral Forum
- Monthly Bioethics Conference (Mandatory Twice Per Year)

Optional as time permits:

- Weekly Grand Rounds
- Monthly Global Case Conference (Second Year Fellows)
- Multidisciplinary Section/Team meetings (required at times, depending on clinical rotations)
- Research Development Seminar (Second Year Fellows)
- Invited Lecturers throughout the University
- Rackham Diversity, Equity, and Inclusion Certificate Program

Teaching/Supervision Experiences

Fellows are provided with the opportunity to perform clinical supervision of pre-doctoral practicum students. Additional supervision of undergraduate students who work with faculty and fellows on a wide variety of research projects is also available. In addition, fellows may also provide assistance in teaching seminars with faculty members.

Clinical Experiences

Child fellows construct an individualized training plan comprised of experiences selected by the fellow in conjunction with their primary faculty mentor. Clinical experiences typically account for 50% of the fellow's experience. All fellows carry a caseload of outpatient clients at the Rachel Upjohn Building that can be picked up from the psychotherapy waitlist or from intake appointments completed by the fellow. In addition, rotations are offered through a variety of specialty clinics including:

Infant and Early Childhood Clinic (IECC) – <https://zerotothrive.org/clinical-services/iecc/> Postdoctoral fellows rotate through this clinic for 1 calendar year to provide those with an early childhood interest the opportunity to pick up early childhood treatment cases and to provide leadership and clinical teaching to fellow trainees (psychology practicum students, psychiatry residents and fellows, social work interns and fellows) with relatively less experience working with young children and parents. Opportunities exist to learn about the Diagnostic and Classification 0-5 system, as well as Child-Parent Psychotherapy, Circle of Security, Mom Power, Parent-Child Interaction Therapy, and other early childhood evidence-based interventions. Opportunities for developmental testing are also available. IECC is an intake/assessment clinic with opportunity to pick up cases for ongoing treatment under the supervision of Kate Rosenblum, PhD, Megan Julian, PhD, and Jessica Riggs, PhD.

Trauma and Grief Clinic (TAG) - <http://www.psych.med.umich.edu/patient-care/trauma-and-grief-center/> TAG clinic runs on Fridays with intake/assessment sessions in the morning, didactic training mid-day, and therapy clients in the afternoons. Polly Gipson, PhD is the primary mentor within this clinic. Postdoctoral fellows interested in trauma and grief work most typically rotate through the whole day clinic, although there is an option to participate only in intake or therapy portions. All trainees in TAG must be present for the didactic portion. TAG is run on 6 month rotations beginning in January and July.

Perinatal Psychiatry Clinic - <https://zerotothrive.org/clinical-services/perinatal-psychiatry-clinic/> Postdoctoral fellows interested in early childhood and/or perinatal mental health often choose to rotate through the perinatal clinic. They are involved in intake/assessments with women who are pregnant or postpartum and their families. Fellows often pick up therapy cases from these intakes as well. The primary supervisors in this clinic are Maria Muzik, MD, Greta Raglan, PhD, Jessica Riggs, PhD, and Leslie Swanson, PhD.

Anxiety and Depression Teams – Psychology fellows participate continually in new patient evaluations, either within one of the above clinics or through our anxiety or depression teams. The anxiety and depression teams are staffed by child psychiatrists and psychologists and provide a great interdisciplinary learning experience. Fellows have the option of picking up additional therapy cases through these evaluations if they have space in their schedule.

Psychoeducational Assessment Clinic – Each postdoctoral fellow will rotate through 1 year of monthly psychoeducational assessments supervised by one of our child neuropsychology or psychology faculty members. Referrals come from the neuropsychology waitlist, but referral questions are more specific to psychodiagnostic, cognitive, or learning difficulties, rather than neuropsychological in nature. Occasionally there are opportunities to rotate through a child autism assessment clinic as well.

CBT Psychotherapy Training Clinic – This clinic is ideal for fellows looking for more intensive CBT specific feedback. It involves live supervision of CBT therapy sessions. The primary supervisors in this clinic, Alejandra Arango Ph.D. and Aileen Prout, LMSW, are experts in childhood depression, anxiety, and OCD.

PMT Psychotherapy Training Clinic – The Parent Management Training Clinic trainees primarily consist of psychiatry residents and psychology practicum students. However, a psychology postdoctoral fellow interested in more intensive PMT supervision is welcome to join this clinic as well. The clinic runs on Tuesday afternoons beginning with didactics, followed by live observed therapy sessions. The primary supervisors in this clinic are Jessica Riggs, Ph.D., and Karen Smith, LMSW.

Program for Risk Evaluation and Prevention (PREP) Early Psychosis Clinic – <https://medicine.umich.edu/dept/psychiatry/programs/prep-early-psychosis-clinic/clinical-care> The PREP clinic conducts differential diagnostic evaluations for individuals experiencing potential perceptual disturbances, suspiciousness/paranoia, and/or imagination/reality distortion. It focuses on early detection and therefore crosses between the adolescent and early adult population. The clinic is staffed by Steve Taylor, MD, Ivy Tso, PhD, Tyler Grove, PhD, and Alejandra Arango, PhD.

Comprehensive Eating Disorders – <https://www.mottchildren.org/conditions-treatments/eatingdisorders>. The CEDP provides a partial hospitalization program (PHP), intensive outpatient (IOP) services, and outpatient therapy for patients 8-22 years of age with anorexia nervosa, bulimia nervosa, and other forms of eating disorders. The program curriculum is based primarily in family based treatment. Other evidence-based treatment modalities are employed in group formats and a highly skilled multidisciplinary team helps support and monitor patients in their recovery. Psychology postdoctoral fellows have opportunities to assist with intake evaluations, lead or co-lead groups, provide meal support, and conduct FBT and/or CBT on an outpatient basis under the supervision of Jessica VanHuyse, PhD.

Dialectical Behavior Therapy (DBT) Group Therapy – Jonathan Marin, MSW, is the primary leader of our adolescent DBT group program. Psychology fellows can participate in this clinic. They will start with rotating through the didactic mentorship portion and observing a group in action and then have the opportunity to co-lead one of the groups. We have also recently added a Perinatal DBT group that fellows may be able to participate in.

Further psychotherapy experiences – The psychiatry clinic is home to supervisors with specializations in numerous different forms of therapy including Child Parent Psychotherapy (CPP), Parent Child Interaction Therapy (PCIT), Early Start Denver Model (ESDM) early intervention for ASD, TF-CBT, CBT for Pediatric Anxiety Disorders etc. We work hard to help fellows have a range of breadth and depth in their clinical training. We aim to ensure that fellows have experience working with many types of clients, but also specific experiences with clientele that match with their research interests in order to inform the exchange of research-practice information.

Research Experiences

Each fellow is also expected to participate heavily in research throughout their 2 year-fellowship, with the goal of helping each fellow develop their own program of research that they can pursue after fellowship. Fellows are paired with a faculty mentor in one of the following areas:

Youth Depression and Suicide Prevention Program

Suicide is the second leading cause of death among youth and young adults in the United States. However, most individuals at high risk for suicide go unrecognized and untreated, and for half of all suicide attempts, the first attempt is fatal. The primary goal of the Youth Depression and Suicide Prevention Research Program (YDSP) is to conduct innovative clinical research that will inform and ultimately improve suicide risk screening, suicide risk assessment, community-based suicide prevention strategies, and clinical interventions for youth and young adults at elevated risk for suicide. With eight faculty members and two postdoctoral fellows, the YDSP team has a longstanding record of active engagement in NIMH-, CDC -, and SAMHSA-funded research projects. The focus of these projects spans the development and validation of a new computerized suicide risk screen, the development of an effective text message support system for youth at risk and their parents, studies of proximal suicide risk indicators and 24-hour warning signs, a study of the feasibility and effectiveness of a technically enhanced Youth-Nominated Support Team intervention (YST), and community-based preventive strategies. For further information please visit:

<https://medicine.umich.edu/dept/psychiatry/programs/ydsp>

Zero to Thrive and the Women and Infants Mental Health Program

Zero to Thrive and the Women and Infants Mental Health (WIMH) Program faculty are actively engaged in research that aims to transform the lives of infants, young children, and their families through understanding of factors related to risk and resilience during this critical period. Current research spans bio-psycho-social approaches, and our multi-generational promotion, prevention and intervention initiatives are aimed at promoting the long-term health and resilience of populations through research, partnership and service. Our vision is to spark vibrant interdisciplinary and cross-sector collaboration that will result in breakthrough, scientifically-based, real-world solutions to improve the health and well-being of families with young children from conception to early childhood and impact generations to come. For more information please visit: <https://zerotothrive.org>

Eating Disorders

The Comprehensive Eating Disorders Program (CEDP) has an active clinical research program aimed at identifying moderators of treatment outcome within our family-based treatment informed partial hospitalization program. We are particularly interested in parental characteristics that predict success in treatment, as well as early indicators of positive treatment process (e.g., rapid weight restoration). Interview, self-report, parent-report, and chart review data (e.g., weight and vital signs) are collected throughout treatment as well as at 3 months and 12 months following discharge.

For more information please visit: <https://www.mottchildren.org/conditions-treatments/eatingdisorders>

Child OCD and Anxiety Disorders Program

The Child OCD and Anxiety Disorders Program (COAP) is a vibrant program integrating both clinical research and patient care. The interdisciplinary team of psychiatrists, social workers, and psychologists employ multi-method strategies to better understand anxiety disorders across development. Current research projects examine mechanisms underlying youth anxiety and obsessive-compulsive disorders, neural predictors of treatment response, and strategies for improving treatment trajectories.

For more information please visit: <https://medicine.umich.edu/dept/psychiatry/programs/child-ocd-anxiety-disorders-program>

Current Fellows

Shane Kentopp – Colorado State University; Denver Health Medical Center (*Internship*)

Jerrica Pitzen – Eastern Michigan University; The Children’s Center (*Internship*)

CORE TRAINING FACULTY BIOGRAPHIES

Alejandra Arango, Ph.D.

Assistant Professor
arango@med.umich.edu

Dr. Arango is a Clinical Assistant Professor in the Department of Psychiatry. She received her Ph.D. in Clinical Science at the University of Michigan. Dr. Arango completed a pre-doctoral internship in Integrated Behavioral Health at Nemours/A.I. duPont Hospital for Children, and a postdoctoral fellowship in the Child Clinical Psychology Program at the Michigan Medicine Postdoctoral Consortium. Clinically, she is interested in working with adolescents presenting with depression, anxiety, psychosis, and trauma, and for whom suicide-specific interventions are a core aspect of treatment. She has been a member of the Youth Depression and Suicide Prevention Research Program since graduate school. Her research interests are in interpersonal factors that impact suicide risk, as well as evidence-based practices for intervening with youth at elevated risk.

Emily Bilek, Ph.D., ABPP

Associate Professor
Child / Adolescent Psychology Training Director
ealaird@med.umich.edu

Dr. Bilek is a Clinical Psychologist and a Clinical Associate Professor in the University of Michigan Department of Psychiatry. She is also the Child and Adolescent Psychology Training Director. Dr. Bilek received her Ph.D. in clinical psychology from the University of Miami, and completed her internship and postdoctoral training at the Mary A. Rackham Institute at the University of Michigan. She is board certified by the American Board of Professional Psychology in Behavioral and Cognitive .

Psychology. Her clinical interests include cognitive behavioral therapies for pediatric anxiety, depressive, and obsessive compulsive disorders. She co-leads the Pediatric Anxiety Disorders Program. Her research interests include identifying underlying mechanisms of pediatric anxiety and depression and mechanisms of treatment and treatment enhancement for cognitive behavioral therapies.

Ewa Czyz, Ph.D.

Assistant Professor
ewac@med.umich.edu

Dr. Czyz is a Clinical Psychologist and an Assistant Professor in the Department of Psychiatry at the University of Michigan. She received her Ph.D. in Clinical Psychology from the University of Michigan and an M.A. in Counseling Psychology from Northwestern University. A member of the Youth Depression and Suicide Prevention Research Program, her interests focus on questions of how we can best identify and intervene with adolescents and young adults who are at risk for suicide. She is especially interested in developing individualized interventions for at-risk youth and studying assessment approaches (including ecological momentary assessment and passive

sensing) that have potential to detect short-term and dynamic changes in suicide risk. Dr. Czyz is a Principal Investigator of two NIMH-funded intervention trials focused on developing adaptive interventions for adolescents at elevated suicide risk and their parents/caregivers. She is also a Principal Investigator of a foundation-funded study aiming to develop and pilot a multi-modal assessment paradigm measuring short-term indicators of suicide risk.

Cynthia Ewell-Foster, Ph.D.

Associate Professor

cjfooster@med.umich.edu

Dr. Cynthia Ewell Foster is a Clinical Associate Professor in the Department of Psychiatry and Rackham Graduate School at the University of Michigan. She holds a Ph.D. in Clinical Psychology (Child and Family Subspecialty). Dr. Ewell Foster is a member of the Youth Depression and Suicide Prevention Research Program; her research program has a particular focus on the development, implementation, and evaluation of family, community and systems-based interventions. She has published numerous peer-reviewed articles and has been the Principal Investigator or Co-Investigator on a variety of federally or foundation funded grants. Dr. Ewell Foster is currently the Co-Investigator and Lead Evaluator for the State of Michigan's SAMHSA-funded youth suicide prevention initiative and the lead evaluator for Michigan's CDC-funded Preventing Suicide in Michigan Men (PRISMM) grant program. Dr. Ewell Foster is also a clinician and clinical educator; she specializes in suicide risk assessment and care management, treatments for internalizing disorders, and the development of family and community supports for young people. Dr. Ewell Foster is the co-author of a recently published book: King, CA., Ewell Foster, C.J. and Rogalski, K. (2013) *Teen Suicide Risk: A Practitioner Guide to Screening, Assessment, and Management*. Guilford Press

Polly Y. Gipson, Ph.D.

Associate Professor

pollyg@med.umich.edu

Dr. Gipson, Ph.D., is a licensed Clinical Psychologist and Clinical Associate Professor in the Department of Psychiatry, Child and Adolescent Section, at Michigan Medicine, University of Michigan Medical School. She serves as the Director of the Trauma and Grief Clinic and the Director of PROMISE. Promoting Resilience and Outreach through Multi-tiered Interventions and Supportive Environments (PROMISE) for Success: A Trauma-Informed and Trauma-Responsive Community Intervention, funded by the Robert Wood Johnson Foundation, tackles the wicked problem of child traumatic stress and its impacts on academic functioning. Dr. Gipson is also a co-investigator for a NIH funded study focused on the warning signs of youth suicide attempters. She is a site principal investigator for a SAMHSA funded investigation focused on the development of bereavement-informed best practices for youth. She is a member of the Youth and Young Adult Depression and Suicide Prevention Research Program. Her expertise is in evidence-based clinical practices; trauma- and bereavement-informed assessment and intervention; suicide risk assessment and intervention; universal screening, brief interventions; and community-based participatory research approaches. Dr. Gipson's activities will continue to focus on implementation science, specifically community-based prevention and intervention strategies for underserved youth at elevated risk for trauma and grief exposure, suicide and other adverse psychological outcomes.

Megan Julian, Ph.D.

Assistant Professor

mmjulian@med.umich.edu

Dr. Julian is a Clinical and Developmental Psychologist and Clinical Assistant Professor in the Women and Infants Mental Health Program in the Department of Psychiatry at the University of Michigan. She completed her Ph.D. in Clinical and Developmental Psychology at the University of Pittsburgh, a clinical internship and postdoctoral fellowship specializing in early childhood at the Yale Child Study Center, and additional postdoctoral work at the University of Michigan's Center for Human Growth and Development. Her research interests include parent-child relationships in the early childhood years, interventions to improve early relational care, and psychological and biological processes that contribute to parenting behavior. Her clinical interests include dyadic relationally-based treatment for young children and their caregivers, parenting interventions, trauma, anxiety disorders, and developmental assessments.

Michelle Kees, Ph.D.

Associate Professor

mkees@med.umich.edu

Dr. Kees is a Clinical Psychologist and Associate Professor in Child and Adolescent Psychiatry. She holds an Adjunct appointment in the Department of Psychology and a Without Compensation appointment at the Ann Arbor Veterans Affairs Medical Center. Dr. Kees is the Director of M-SPAN (Military Support Programs and Networks), a portfolio of innovative programs addressing military and veteran mental health. Her clinical and research expertise centers on risk and resilience in female veterans, military spouses, caregivers, and families; peer programs supporting access to services for veterans; and iterative development, evaluation, and large-scale dissemination of evidence-based intervention programs. She is the Principal Investigator for HomeFront Strong, a Department of Defense funded resiliency intervention for military and veteran spouses and their children. She is also the Principal Investigator for PAVE (Peer Advisors for Veteran Education), a student veteran peer mentorship program on 41 college campuses nationwide. Additionally, she and her team recently launched a new program for women veterans, After Her Service, that focuses on the intersection of mental health and employment success for veteran women transitioning into civilian life. Dr. Kees has been at the University of Michigan for 17 years, and was a founding member of M-SPAN in 2008. She received her PhD in Clinical Psychology at SUNY Stony Brook, completed a clinical internship at Children's Memorial Hospital in Chicago, IL, and completed a 2-year postdoctoral fellowship at the Center on Child Abuse & Neglect at the University of Oklahoma Health Sciences Center.

Cheryl King, Ph.D., ABPP

Professor

kingca@med.umich.edu

Dr. King is a Professor in the Departments of Psychiatry and Psychology at the University of Michigan where she also serves as Director of the Youth Depression and Suicide Prevention Research Program. Her research focuses on the development of evidence-based practices for suicide risk screening, assessment, and intervention. She is currently Principal Investigator of three NIMH-funded research projects: Emergency Department Screen for Teens at Risk for Suicide

(ED-STARS), which aims to develop an adaptive suicide risk screen that can be disseminated nationwide; Electronic Bridge to Mental Health for College Students (eBridge), which aims to test the efficacy of an online suicide risk screening and treatment linkage counseling program; and 24-Hour Risk for Suicide Attempts in a National Cohort of Adolescents. A clinical educator and research mentor, Dr. King has served as Director of Psychology Training and Chief Psychologist in the Department of Psychiatry, and has twice received the Teacher of the Year Award in Child and Adolescent Psychiatry. She is the lead author of *Teen Suicide Risk: A Practitioner Guide to Screening, Assessment, and Management*. In addition, Dr. King has provided testimony in the U.S. Senate on youth suicide prevention and is a Past President of the American Association of Suicidology, the Association of Psychologists in Academic Health Centers, and the Society for Clinical Child and Adolescent Psychology.

Rena Menke, Ph.D.

Assistant Professor

renaam@med.umich.edu

Dr. Menke is a Clinical Assistant Professor in the Department of Psychiatry. She received her Ph.D. in Clinical Psychology with minors in development and statistics from Wayne State University. Dr. Menke completed a pre-doctoral internship at the Mary A. Rackham Institute at the University of Michigan, and a postdoctoral fellowship in the Women and Infants Mental Health Clinic in Psychiatry at the University of Michigan. Clinically, she is interested in the implementation and development of mental health programs to increase access to perinatal persons and their families; the development of mental health programs to address relationships between perinatal persons, and their children; and the development of effective training techniques for mental health professionals at various stages of development. Her research interests include the lifetime and intergenerational impact of maltreatment during childhood; evidence-based interventions to support resilience in perinatal populations, and implementation and development of virtual mental health programs to increase access to perinatal persons. She has been a member of Zero to Thrive since the inception of the program.

Jessica Riggs, PhD
Assistant Professor
jlriggs@med.umich.edu

Dr. Riggs is a Clinical Psychologist and Assistant Professor in the Women and Infants Mental Health Program in the Department of Psychiatry at the University of Michigan. She completed her Ph.D. in Clinical Psychology at Eastern Michigan University, a clinical internship at the Mary A. Rackham Institute's University Center for the Child and Family, and a postdoctoral fellowship specializing in infancy and early childhood at Michigan Medicine. Her research interests include interventions that bolster early parent-child relationships and promote resiliency in the context of

intergenerational stress and trauma. She is also involved in research focused on improving implementation of assessments and interventions in the community. Her clinical interests include relationally-based treatment for infants, toddlers, and young children and their caregivers, parenting interventions, trauma-informed interventions, as well as autism and developmental assessments.

Kate Rosenblum, Ph.D.

Professor
Departments of Psychiatry and Obstetrics & Gynecology
Co-Director, Women and Infants Mental Health Program and Zero to Thrive
katier@med.umich.edu

Dr. Rosenblum is a clinical and developmental psychologist and a Professor of Psychiatry and Obstetrics and Gynecology. In Psychiatry, she co-directs the Zero to Thrive Program (www.zerotothrive.org) and the Infant and Early Childhood Clinic. Dr. Rosenblum is the psychologist consultant to the UM School of Law's Child Advocacy Clinic, a member of the Academy of Fellows with the national organization Zero to Three, and is a member of the Board of Directors of the international Alliance for the Advancement of Infant Mental Health. Her research, teaching and clinical work focus on parenting, infant, and early childhood mental health. Dr. Rosenblum has published extensively, and her research, supported by both federal and foundation grants, focuses on preventive intervention and intervention for vulnerable families with infants and young children. She is the co-developer of the Mom Power preventive intervention and is involved in the development and evaluation of several of its adaptations, including the Fraternity of Fathers, the Strong Military Families program, and Strong Beginnings, which focuses on support for foster and bio parents involved in the child welfare system. Many of the families she works with have experienced significant disruptions, including separations, trauma, and/or loss. In these contexts, her research focuses on understanding intergenerational transmission of risk and resilience and on interventions to strengthen protective factors and enhance family resilience.

Jessica Van Huysse, Ph.D.

Assistant Professor
jvanhuy@med.umich.edu

Dr. Van Huysse is a clinical psychologist and Clinical Assistant Professor in the Department of Psychiatry and Clinical Director of the University of Michigan Comprehensive Eating Disorders Program. She completed her Ph.D. in Clinical Psychology at Michigan State University, a clinical internship at West Virginia University – Charleston, and a health psychology postdoctoral fellowship at the Consortium for Advanced Psychology Training/Michigan State University School of Medicine. Her research interests include moderators of treatment outcome in family based treatment for eating disorders and understanding the etiology of eating disorders using behavioral genetic approaches. Her clinical interests include family-based treatment and cognitive behavioral therapy for eating disorders.

AFFILIATED TRAINING FACULTY AND STAFF

Sheila Marcus, M.D.

Clinical Professor
Section Chief, Child and Adolescent Psychiatry

Jonathan Marin, LMSW
Clinical Social Worker

Maria Muzik, M.D.

Associate Professor
Departments of Psychiatry and Obstetrics & Gynecology
Co-Director, Women and Infants Mental Health Program and Zero to Thrive

Dr. Muzik is an Associate Professor of Psychiatry and Obstetrics & Gynecology. Her expertise is in women's mental health in relation to reproduction with a specific focus on trauma and trauma-related perinatal mental health conditions. Her background is also in developmental psychology, parenting, parent-child relationships and psychotherapy. She conducts cutting-edge research, directs patient care services, and oversees educational programing.

At Michigan Medicine, Dr. Muzik co-directs the Zero to Thrive Program and serves as Medical Director of the Perinatal Psychiatry Clinic, a nationally known program serving hundreds of women each year with mood concerns related to perinatal loss, preconception, pregnancy or postpartum. She also leads the integration of perinatal mental health services within obstetrics, family medicine and pediatrics. Across the State of Michigan, Dr. Muzik serves as lead perinatal consultant to primary care, public health nursing, community mental health and other health systems. Her research focuses on the study of stress, trauma and mental illness in the context of childbearing, its influence on parenting and the developing parent- infant relationship, and how to support families in overcoming adversity. She has published over 100 peer-reviewed articles and book chapters, and recently co-edited a book on motherhood in the face of trauma. She directs a number of studies focused on interpersonal violence, childbirth trauma, posttraumatic stress, depression in pregnancy and postpartum and their effects on the developing child, and on interventions to buffer risks and enhance resilience. Her research is funded through grants from the National Institute of Health, Foundation grants, and grants through the State of Michigan.

Karen Smith, LMSW
Social Work Coordinator

Karen Smith is a Social Work Clinical Scholar and Coordinator in the Department of Psychiatry and the Department of Social Work at the University of Michigan. She serves as the Manager of the Zero to Thrive Infant and Early Childhood Clinic. She is Co-Director of the Parent Management Training Clinic. Her primary clinical interest is in the treatment of young children and their caregivers who have experienced trauma and early relationship disruptions. In Karen's research roles, she has worked with military families, implementing a group for families, Strong Military Families. She also serves as the clinical supervisor for an Infant Mental

Health Home Visiting Study.

ANN ARBOR LIFE AND COMMUNITY

The University of Michigan is located within the mid-sized city of Ann Arbor. The 2010 Census recorded its population to be 113,934, making it the sixth largest city in Michigan. Ann Arbor is renowned for its cultural offerings and is home to an avid base of sport enthusiasts. Ann Arbor has you covered year-round, whether you enjoy arts, sports or recreational activities, shopping, festivals, casual or fine dining, family-friendly activities, or nightlife. Ann Arbor is also home to award winning public schools and higher

learning universities and colleges. For further information please visit www.visitannarbor.org.

Clinical Psychology Application Process

The application deadline for the Child Clinical Psychology fellowship is December 1, 2022. An application cover sheet with instructions can be downloaded at <https://medicine.umich.edu/dept/psychiatry/education/other-programs/psychology-postdoctoral-training>.

Application materials include:

- A completed application cover page
- Letter of interest/Statement of future goals
- Graduate School transcripts
- CV
- 3 letters of recommendation

For general questions about the program, contact Danielle Hayes, the Psychology Postdoctoral Residency Training Program coordinator (UM-VA-PostdocApply@umich.edu or 734-763-4872). For specific inquiries about child training opportunities, contact Emily Bilek, Ph.D., Child Psychology Training Director (ealaird@med.umich.edu)

The program offers stipends in line with NIH guidelines. The current rate for a 1st year fellow is \$54,840. In addition, residents receive medical benefits, paid vacation days, and travel support for professional development.

Candidate interviews take place typically in January. Interviews will be completed virtually for this training year. After a review of applications, individuals will be contacted for interview.

The program plans to adhere to the Common Hold Date (CHD; February 27, 2023).
